PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience in fintech building high-volume, scalable applications using C#, .NET, and Python. Improved system performance by 35% and reduced latency by 30% for 10K+ users through innovative microservices architecture. Proficient in designing RESTful APIs and CI/CD pipelines, delivering quality software in Agile environments, and enhancing user engagement by 30% through real-time applications.

SKILLS

Programming Languages: Go, C#, Python, HTML/CSS, React.js, Postgres, Claude, Google AdWords
Backend & AI: .NET, WPF, FastAPI, REST APIs, Node.js, Flask, XAML, GraphQL, gRPC, RabbitMQ, Redis
Cloud & DevOps: AWS, Docker, Git, CI/CD, Kubernetes, Microsoft Azure, Terraform, CloudFormation
Testing & Machine Learning: PyTorch, TensorFlow, Pinecone, MongoDB, Grafana, opentelemetry, Agile, Nunit

PROFESSIONAL EXPERIENCE

PhillipCapital

Software Engineer

September 2022 - July 2024

Mumbai, MH, India

- Developed a high-performance equity trading dashboard using Go and React, enabling brokers to process real-time market feeds, reducing data latency by 40%.
- Lifted throughput 35% and cut p99 latency 30% for 10K+ users by refactoring event-driven distributed microservices in Python with RabbitMQ and Redis for resilience and performance.
- Designed OAuth2-secured REST APIs in Go and Python across 3 apps using object-oriented design and OpenAPI specs, accelerating partner integration delivery 20%.
- Deployed a Python anomaly detection service to Azure AKS using NumPy z-score analysis on regulated trade flows, cutting compliance review 30% for 200+ institutional clients.
- Cut onboarding from days to minutes for 200+ clients by building an AI-native data-ingestion pipeline (Python, Azure AI Document Intelligence, OCR) that automated document processing
- Architected a GraphQL service in Go backing the trading UI to consolidate REST endpoints, improving network efficiency and cutting data payload size 40% for active trading users.

PhillipCapital

Junior Software Engineer

April 2021 - August 2022

Mumbai, MH, India

- Built a Python data ingestion pipeline using Tesseract OCR and rule-based NLP on 5K+ daily documents, cutting extraction errors 50% for downstream analytics workflows.
- Increased user engagement 30% for 1,000+ users by shipping real-time Python alerting for price and volume anomaly triggers.
- Automated deployment workflows in Git with regression test gates, reducing manual effort 60% and improving live-service reliability.
- Enhanced database performance using MS SQL Server by implementing indexing and query optimizations, leading to a 45% decrease in reporting query times.

George Washington University

Student Project Assistant (Software Engineer)

August 2025 - May 2026

Washington, DC, USA

- Developed an AI-powered framework using Python to integrate with OpenAI API for LLM evaluation, achieving a 30% reduction in data validation errors for over 30 faculty users.
- Engineered a robust ETL pipeline in Python, optimizing data extraction from PostgreSQL into Tableau, which cut reporting turnaround by 50% and enhanced data visibility.

PROJECT EXPERIENCE

DataInsight AI – Multimodal Intelligence Platform

February 2026 - April 2026

- Engineered a fullstack RAG application in Python/FastAPI and ReactJS using LangChain and Elasticsearch for hybrid keyword and vector search over Qdrant, returning grounded answers in 2s across 200+ page documents..
- Shipped LangChain document loaders for PDF, image(OCR), and audio/video via Whisper ASR with tuned RecursiveCharacterTextSplitter chunking, cutting time-to-first-response 40x (12s to 300ms).
- [Link to project](#)

Textguard Risk & Compliance

October 2025 - December 2025

- Built an automated Compliance classifier in Python/Flask flagging risk items with PyTorch DistilBERT fine-tuning and OpenAI/Gemini APIs as backup checks, cutting manual review 25%.
- Engineered a scikit-learn evaluation pipeline (precision, recall, F1) with Terraform-provisioned audit dashboards, improving incident response time 40% for policy enforcement workflows.
- [Link to project](#)

Telehealth Dashboard

October 2024 - November 2024

- Launched a responsive Rust/ReactJS app with SSR-rendered geolocation filtering for hospital & insurance providers, achieving 99.9% uptime under 1,000+ concurrent sessions via Grafana monitoring.
- [Link to project](#)

EDUCATION

George Washington University

Master's, Computer Science

August 2024 - May 2026

GPA: 3.6

Coursework: Machine Learning, Artificial Intelligence, DBMS II, Cloud Computing, Trustworthy AI, Computer System Architecture, Data Structures and Algorithms, Natural Language Understanding, Object Oriented Design(OOP)

Savitribai Phule Pune University

Bachelor's, Computer Science

August 2016 - May 2020

GPA: 7.1
